

Nashua Goes Green With Recycled Cores

As a concerned corporate citizen, Nashua Corporation is always looking for green solutions that will benefit not just our organization, but the communities that we live in and service. Over the years, we have implemented a number of green programs such as recycling of waste paper from our manufacturing operations; marketing of recycled paper grades for use in POS printers; and ongoing water treatment operations in our paper coating facility.

Recently, our product research team has found a way to utilize recycled materials

in our POS roll products. Today, we use honey cone, and solid wall cores that are made from polystyrene. After doing some testing, we have decided to switch to a polyethylene product that has a 30% post consumer waste content. Soon you will see the new cores in our stock POS supplies offering. The new cores are black in color, and are produced to the same specifications as our previous product. These cores can also be disposed of with other recyclable plastic materials.

Recycled Materials – It's the Right Thing to Do!
