

# Scratch & Secure™ UV Plus

**New UV Plus changes color when Scratched, and Illuminates under UV light - defies duplication but looks just like regular Ink.**

*Ink will glow under a UV/black light.*

*Scratch & Secure bottom color can be changed with chemical pen.*

*Scratch & Secure ink changes color when scratched. Enables easy verification of authentic receipt.*

*For back of receipt you can use single color with UV additive for additional level of security.*

*Attempts to remove ink and change prices will result in exposing bottom color of Scratch & Secure ink.*

*Use Scratch & Secure ink along the edges or across the front. Print top color in light beige or gray (almost impossible to reproduce digitally) to help make identification easy and act as a visual deterrent.*

Protect yourself against fraudulent duplication of receipts with Nashua's exclusive Scratch & Secure POS rolls, offering you the highest level of security for your paper receipts on the market today!

**Security Level 1:** Scratch & Secure receipts can't be copied – our unique Scratch & Secure ink changes color when scratched. To verify a receipt, simply scratch along any Scratch & Secure ink area that hasn't been overprinted... if it's an authentic receipt a second color will show.

**Security Level 2:** Whenever you print your POS rolls, the color combinations can be changed.

**Security Level 3:** Scratch & Secure UV Plus will illuminate under UV light for easy detection.

**Security Level 4:** Not available on the open market – sold exclusively to retailers for internal use.

- Ink can be positioned anywhere on the roll to meet customer's specific requirements.
- Bottom and top colors are easily changed to foil theft of authentic rolls.
- Scratch & Secure ink can be used like regular ink to print any logo or other image.
- Unique Scratch & Secure ink can be used for non-security applications, such as highlighting information on receipts, tickets, hospitality checks, and labels.
- A chemical pen can be used to authenticate. Pen will cause the ink to change to a different color than the one that is scratched.
- Ink will glow under a UV/black light.
